

DACTYLCAM PRO

PRODUCT FEATURES:

- Capable overall payloads up to 100lbs and speeds of 30 mph.
- Digital Safety Stops allow users to set end-points for completely safe operation
- Additional Safety Pulleys attach to frame adding redundant line for safety and security
- Digital readout on sled and pulse controller provides data for power, connectivity and position
- Pulse controller shows real-time data of power, position on line, travel, speed and distance from end as well as programming top speed, acceleration and deceleration
- Adjustable drive wheel tensioner for greater traction with different line tensions
- Power all accessories with integrated Dtaps on each side of the sled as well as a variety of cheese plates for mounting nearly any accessory
- Active traction control keeps the wheel from spinning reducing wear on the line and increase traction during wet / dry conditions or incline and decline
- Camera swing acts as a dampener for attaching nearly any head with standard cheesplate or Mitchell mount
- Integrated dual Li-Ion battery packs lock inside the sled and allow power to the sled and accessories for up to 4 hours of operation. *length of operation depends on weight, line tension, consistency of operation and power consumption of accesories
- Spring loaded locking pins keep the system
