

CINEMOVES
THE ART OF CAMERA MOVEMENT

Cinemoves Arm Car

DESCRIPTION

Speed

Our team at Cinemoves built and designed the fastest most stable platform in the arm car world to date. Our mission was set out to find the perfect balance of performance, speed and stability. Our platform is a new generation Porsche Cayenne, A proven vehicle with over 550 hp with a suspension and braking package to withstand the grueling demands of film making.

Crane

The Cinemoves stabilized crane was designed and rigorously tested to meet the demands of all camera packages. The Stabilized crane is capable of supporting all remote heads and can carry large payloads for any size camera or idea that comes to a creative mind. We achieved this by adding computer controlled dampening which provides the utmost in stabilization as well as the ability to tune the crane for varying terrain or situations.

Remote Heads

At Cinemoves we have always strived to provide our clients and filmmakers the latest in remote head technology. We applied all of this knowledge, power and combined with the Cinemoves arm car our success has been unimaginable. We have integrated our Matrix 4 Axis Remote Head as well as the Oculus Remote Head to work seamlessly with the Arm Car. Not only do we have the stabilization needed for the most demanding lenses and cameras but we have also introduced a hand held shaker box and the ability to do unlimited 360 rolls unlike any other remote head, We at Cinemoves also love the challenge of asking our remote heads to do things any filmmaker can dream of. We staff the highest level of engineering teams to cater to these requests putting camera control in the hands of the operator or client. This has allowed us to constantly improve our ability to stabilize in any configuration.

Clients

Cinemoves has been servicing the film industry for decades and will continue to provide cutting edge technology and products to our clients. We strive for excellence in all aspects of camera movement and we thank you for the opportunity to serve you in future. Family, It is what our business is built on, creating friendships and relationships that last a lifetime and continue a path to excellence is our goal.

Please reach out to our staff to schedule a demo or if you have any questions regarding our services

Thank you

SPECS

Cinemoves Camera Car

550 HP Porche Cayenne Turbo

Monitors: Small HD 13 inch Monitors Standard

Communication : Four person intercom Motorola production radio compatible

Recording Devise: Pix auto flagged recording devise standard

Tires: Off Road & Street Tires dependent on terrain

Mud-flaps: Standard for reducing the debris coming from the arm car

Power: 4 Pin XLR 12 volt power supplied through the vehicle

Cinemoves Crane

Two Axis Stabilization with programmable stops and safety functions

Length: 16 FT Standard / 20 FT Extension

Overslung compatible for all remote heads / Allows for quickly achieving a much higher shot by Overslinging the Remote Head

Computer dampened for harsh or difficult terrain providing maximum stability

Sliding weight bucket for quick rebalances or lens changes

360 Degree rotation / Four (4) Seconds

Cinemoves Remote Head

Matrix / Oculous 4 Axis Gimbal

Camera Power supplied

Shaker Box / Both Handheld and desk operational

Additional Still Camera Compatible

Wireless video option

Rain Spinner: Eliminator style rain spinner with internal on/off switch in vehicle or remote operation
